

BUILDING MATERIALS POLICY

“Translation of originally issued in Spanish and prepared in accordance with the regulatory applicable to the Group. In the event of a discrepancy, the Spanish-language version prevails”

Grupo ACS, in line with the requirements of Dow Jones Sustainability Index (DJSI), seeks to develop the following good practices in the referral process of building materials to customers, in tenders where applicable:

1. Propose a traceability analysis of 100% of the products used.
2. Develop a list of suppliers that offer recycled / certified products.
3. Reaffirm the importance of aspects such as durability and maintenance costs when selecting building materials.
4. Report on the characteristics of products that emit harmful gases or contain harmful components / substances, and the life cycle of products.
5. Always incorporate in the tender offer a choice of certified wood, reporting on the environmental benefits of their use.
6. Always incorporate in the tender offer the option of using recycled aggregate concrete, reporting on the environmental benefits of their use.
7. Detail environmental characteristics of building materials proposed, as the energy consumed by the equipment in its extraction or treatment, emissions of greenhouse gases, etc.
8. Report on the corporate policy on waste management.
9. Report on plans for waste management projects, including the design phase.
10. Report on the specific objectives of reduction, recycling and reuse of waste.
11. Report on ongoing procedures for the recovery and recycling of construction materials from subcontractors.

12. Detail the current training processes of staff and subcontractors in waste management techniques.
13. Detail the existing waste separation processes in facilities and project works.
14. Promote the sale and purchase of recycled / reused products.
