

The project FATE “**ASPHALT PAVEMENTS FOR EXTREME TEMPERATURES**” (**file number IPT-2012-0977-370000**) intends to develop, under the leadership of DRAGADOS (ACS Group), from an economic and sustainable standpoint, an efficient solution for construction of long-term pavements in continental climates where seasonal temperature gradients are very charged. For this development DRAGADOS counts on the collaboration of CIESM-INTEVIA and research partner University of Granada. The project is co-funded by the Spanish Ministerio de Economía y Competitividad (**MINECO**) within the National Scientific Research, Development and Innovation Plan 2008-2011 (**INNPACTO 2012**) and the European Union through the **FEDER FUNDS** (Regional Development European Funds).
