

The project "**DEVELOPMENT OF ADVANCED COMPUTATIONAL SOLUTIONS FOR THE MANAGEMENT OF CDW (AVANRES)**" with file number **IPT-2012-1201-310000** is led by **DRAGADOS** (Grupo ACS). The project aims to develop a set of collaborative computational models based, mainly, on Computational Intelligence and knowledge that allow **estimating the volume of CDW** that is generated during the course of a construction project. For this development, **Vias y Construcciones, SA**, **Gestora de Runes de la Construcción SA** and **Fundación CARTIF** are partners of DRAGADOS. The project has been co-financed by the Ministry of Economy and Competitiveness (**MINECO**) within the National Plan for Scientific Research, Development and Technological Innovation 2008-2011 (**INNPACTO 2012**) and the European Union through the **ERDF funds** (European Fund for Regional Development) .
