

The project LINEO “**Real-time locating system based on interactive technologies for its application in construction environments**” (file number IPT-2011-1241-390000) intends to develop, under the leadership of DRAGADOS (ACS Group), a real time locating system to reduce accident rates related to collisions (machine-machine or machine–worker) in construction work sites. For this development DRAGADOS counts on the collaboration of SICE (industrial partner) and two research partners (University of Valencia and Polytechnic University of Madrid). The project is co-funded by the Spanish Ministerio de Economía y Competitividad (**MINECO**) within the National Scientific Research, Development and Innovation Plan 2008-2011 (**INNPACTO 2011**) and the European Union through the **FEDER FUNDS** (Regional Development European Funds)
