

Development of reinforced concrete segments with nonmetallic fibers of high durability and improved sustainability

DURADOV

The objective of DURADOV Project is the development of a new concept of a sustainable and high durability concrete segment, reinforced only with non-metallic structural fibers, to be used in tunnel construction.

CONSORTIUM

The project has been funded by the Ministry of Economy and Competitiveness within the program *Retos-Colaboración* 2015 under the State Program of Research, Development and Innovation for Social Challenges under the framework of the State Plan for Scientific and Technical Research and Innovation 2013-2016, and by the European Union, with FEDER funds and project number **RTC-2015-3617-4**, with the aim of promoting technological development, innovation and quality research.

INTELLIGENT TRANSPORT, SUSTAINABLE AND INTEGRATED
