

ACS wins Long Island Railroad contract, in New York, worth € 1,530 Million

Madrid, 13th December, 2017

ACS Group, through its affiliates Dragados USA and John P. Picone, Inc. has been awarded the Long Island Rail Road (LIRR) Expansion project, to design and build a 9.8-mile third track between Floral Park and Hicksville, in Long Island, New York, for a total amount of €1,530 Million.

The total amount includes the € 1,238 Million Base Contract Work and options for a completion scope of work and garages.

The scope of work for the Project includes the construction of approximately ten miles of third track, including third rail, ties, switches, cable, signal equipment, utility poles and other items needed to support railroad operations, and the elimination of seven street-level train crossings in Nassau County, New York. In addition, the project includes construction of up to 5 parking garages, construction of retaining walls, utility relocation, fencing, station improvements and construction of new station platforms, along with measures to reduce impacts on adjacent communities such as sound attenuation barriers and landscaping.

Once completed, the LIRR Project is a transformative improvement to the current system. It will expand capacity, improve reliability, improve safety by eliminating all grade crossings along the Project corridor, and allow for bi-directional service at all times during the day. In addition, the Project will improve quality-of-life in adjacent communities by improving the appearance and functionality of stations within the corridor, reducing noise through the use of noise attenuation walls and reducing air pollution and eliminating wait time associated with idling vehicles at grade crossings.

This award highlights the strength of the ACS companies in the highly competitive New York market and further reinforces the soundness of Dragados Group' footprint in the United States, already well entrenched through our strong presence in Texas, California, Arizona, Virginia, Georgia, Florida, Alabama, Massachusetts, Washington, Ohio, Illinois, North Carolina, Connecticut, New Jersey, and New York.
